ONLINE COURSE DEVELOPMENT: CGS Standards of Good Practice
INSTRUCTOR’S GUIDE

AY 2017-18

2ND EDITION
Congratulations! We are very pleased that you have been assigned to develop and teach an online course for CGS. We want to make your course development process and teaching go as smoothly as possible and to ensure that students are receiving the best possible online education experience. The following guide provides a detailed overview of the CGS online course approval and development process as well as a summary of expectations for CGS online instructors based on best practices and standards in online education.

Please read this information carefully and do not hesitate to contact us if questions arise or further assistance is needed.

SECTION I: CGS ONLINE COURSE DEVELOPMENT APPROVAL PROCESS

CGS ONLINE COURSE DEVELOPMENT APPROVAL FORM

In order to offer an online course for the first time through CGS, each course developer completes this form and has it signed by the respective department chair, documenting for CGS that the department knows that they approved the course instructor to develop a CGS Online version of the course. The CGS Director of Academic Programs then forwards the form to the CGS Assistant Dean of Academic Affairs and the Director of the McCarl Center and the College of General Studies for second approval and signature, documenting that CGS wants the course developer to transition and teach a CGS Online version of the course. A copy of the signed form is forwarded to the course developer and the original is kept on file in CGS. In addition, each course developer is expected to meet with a teaching and learning consultant from the University Center for Teaching and Learning to discuss the scope and type of training and support s/he will need prior and during the development of the CGS online course.

CGS ONLINE DEVELOPMENT CONTRACT

The contract consists of two parts: a memorandum and the CGS Online Policy Statement. The course developer will have to sign both; CGS will sign the memorandum.

Memorandum. This document serves as an agreement between the course developer and CGS. It identifies the course to be developed and the amount to be paid for successful development, as well as specifying the terms under which the agreement may be cancelled. Each course developer signs and returns the original, and CGS will sign and file it, sending the course developer a copy with all signatures.

CGS Online Policy Statement. This document explains the policies regarding courses developed for CGS Online: a course developer’s responsibilities, the nature of the instructional design help CGS may provide, how development approvals and payments are handled, royalties and copyrights, and the University’s policy on affirmative action. Course developers sign and return the original, and CGS files it, sending a copy back.

PAYMENT

After the course is considered “complete,” CGS Academic Affairs will notify the CGS payroll coordinator to submit payment to payment processing. It typically takes a minimum of 4-6 weeks for receipt of payment; the delay results mainly from payment processing’s calendar, over which CGS has no control.

Note that during the first offering of the course, a teaching and learning consultant from the University Center for Teaching and Learning (the Teaching Center) will be enrolled in the course and provide ongoing support culminating in a final one-on-one meeting. Upon the completion of the course, instructors are expected to submit a final reflection report to the CGS Academic Director noting successful aspects of the course as well as any changes and improvements they would like to make for the next time around. It is also assumed that the department offering the course will evaluate the course’s content and effectiveness in ways that are comparable to the evaluation of face-to-face (in-class) course offerings. CGS online course offerings reflect the quality of the department, the college, the university in the same way that face-to-face courses do, and as such, online courses are expected to hold the same high standards as traditional courses. Online courses failing to meet appropriate standards may be withdrawn from the course offerings by the host department or CGS Academic Affairs. Prior to completing this form, the instructor is expected to have and read and fully understand the documents, CGS Online Standards of Good Practice and CGS Expectations for Online Faculty.
CGS ONLINE: INSTRUCTOR APPROVAL FORM

Proposal for New CGS Online Instructor (Existing Course)

INTRODUCTION: All courses to be offered through CGS Online and new sections of online courses to be taught by a different instructor than the originator must be proposed to the College of General Studies using this form.

The content of the course and the course development project must first be approved by the academic department in which the course exists (approval by the department chair must be indicated on page 4).

CGS Online course offerings reflect the quality of the department, the college, and the university, and as such, online courses are expected to meet the same high standards as traditional courses.

• Prior to completing this form, the instructor is expected to read and fully understand the CGS Online Instructor’s Guide located on the CGS website: http://www.cgs.pitt.edu/about/faculty-resources/developing-online-courses
• All instructors new to CGS Online, whether teaching or developing an online course for the first time, should plan to meet with a teaching and learning consultant from the University Center for Teaching and Learning (aka The Teaching Center) about their online course before the submission of this proposal. At the meeting, you will discuss the type of training and support you will need prior and during teaching/developing your CGS online course.
• Please note that before the first offering of the course, it will be reviewed by the College of General Studies using criteria included in the CGS Online Course Development Rubric on pg. 15.
• Online courses that fail to meet appropriate standards may be withdrawn from the course offerings by the academic department or the College of General Studies.

Course Name: ______________________________________________________
Course Number: ___________________________ Credit Hours: ___________________________
Course Instructor(s): ______________________________________________________

Course Description from Catalog: ____________________________________________
_________________________________________________________________________
_________________________________________________________________________

What is the modality of this course? Web _____ Hybrid _____
If a hybrid, how many face-to-face sessions will you require? _______
What is the proposed enrollment limit for this course section? _______

(Note: Online course offerings are limited to a smaller number of students (approx. 20). Instructors seeking to increase the number of enrollments should consider the pedagogical and course management impact as well as the level of student-to-instructor interaction required and provide an explanation of the instructional and assessment methods that they plan to use and how these methods are designed to support a greater number of students.)
When will this course initially be offered?  
Term _____  Year _____

Are there any prerequisites for this course?  
Yes _____  No _____

If yes, please list and note whether or not they are currently available online.

Revised 8/8/2017
CGS ONLINE DEVELOPMENT CONTRACT

I. MEMORANDUM

To: [Faculty Name]
From: xxx
   Assistant Dean, College of General Studies
   xxx
   Director of the McCarl Center and the College of General Studies

Subject: Memorandum of Agreement, CGS Online Course Development
Date: [date]

This memorandum will serve as an agreement between the University of Pittsburgh’s College of General Studies and [Faculty Name] (Developer), who is developing the CGS Online course [DEPT #### Course Title].

The Developer of the course has reviewed and agrees to abide by the CGS Online Policy Statement on Instructional Materials Development and to meet the established development schedule which shall be produced, in writing, within 30 days of the date of this memorandum. In the event of any conflicts between the CGS Online Policy Statement and this Agreement, this Agreement shall control.

The Developer agrees to seek prior written approval from the College of General Studies for changes to the agreed-upon scope of work or project timeline.

The College of General Studies reserves the right to stop development work at any time without prior notice. In the event that the College of General Studies stops work through no cause or fault of Developer, Developer will be paid on a pro-rata basis according to work completed as determined by the Associate Dean of the College of General Studies. In the event the work stoppage is due to fault of Developer, including incomplete or improper work or failure to meet the established development schedule, no payment will be forthcoming. It is material to this Agreement that Developer adhere to the development schedule.

The College of General Studies agrees to provide the Developer with payment of [$xx new 3 cr. / $xx rev sp / $xx new 1 cr.] for development of instructional materials. Payment will be submitted for the next monthly payroll deadline upon review and acceptance of the final course materials by the College of General Studies.

The College of General Studies will offer this course after completion of the materials. The Developer agrees to teach this course during this initial offering and make any required revisions to the course materials based upon this experience. Limited faculty support for revision may be provided upon approval from CGS.

Accepted by:

II. CGS ONLINE POLICY STATEMENT/SAMPLE

*Instructional Materials Development*

**COURSE NAME:** [Course Title]

**CATALOG NUMBER:** [DEPT ####]

The policy regarding the development of instructional materials for course offerings through CGS/CGS Online is described below. The term *development* is used to refer to the process of development, initial teaching and first revision of a set of instructional materials. The term *Developer* refers to the assigned faculty member(s) or instructor who has signed the development agreement.

**I. ASSISTANCE TO BE PROVIDED TO DEVELOPER**

A. The Developer will receive payment for the completion of the development of instructional materials in accordance with this statement and the development agreement.
   1. The mode and form of payment will be consistent with University policies and procedures.
   2. The range of payments for development will be determined by academic rank.
   3. Payment within the predetermined ranges depends upon the scope of the development task.
   4. Payment may vary dependent upon the extent of the design and technical support that is required from CGS/CGS Online and the University Center for Teaching and Learning (UCTL).

B. The Developer may consult with an instructional designer.

**II. RESPONSIBILITIES OF THE DEVELOPER**

A. The Developer is responsible for adhering to the written development schedule established jointly with CGS/CGS Online.

B. The Developer is responsible for the academic content and proper attribution of the course and the materials contained in the course.

C. The Developer is responsible for the following:
   a. Identify student learning needs;
   b. Specify course goals and objectives;
   c. Choose appropriate methods, instructional strategies and media;
   d. Implement teaching and interactive tools with the assistance of an UCTL teaching and learning consultant;
   e. Import materials into Blackboard;
   f. Develop procedures and instruments to assess student learning;
   g. Edit and proofread all drafts of materials;
   h. Collect and analyze formative course evaluation data obtained during first semester;
   i. Revise the instructional materials based upon the results of the data.

D. The Developer is responsible for informing the CGS/CGS Online of any published or third-party copyright protected materials to be used during the development process and for securing copyright clearances for on-line use as may be required.

E. The Developer is responsible for providing any course content in a digital format.
F. The Developer is responsible for final proofreading of all instructional materials.

G. The Developer is responsible for teaching the course in the academic term specified in the written development schedule. Developer is responsible for coordinating any teaching and course load issues with his or her School/Department.

III. APPROVAL AND PAYMENT

A. The Developer is responsible for submitting the completed course to the Director of Academic Programs at CGS in accordance with development schedule. The Director of Academic Programs at CGS will be the final approval authority and approval will not be unreasonably withheld. Payment will then be processed to Developer in accordance with Agreement.

B. The Developer is required hereunder to provide the initial teaching, and this will be compensated according to University policy. If low enrollment or other reasons beyond the control of Developer force a cancellation of the Course, Developer may be excused from this requirement.

C. Developer is required hereunder to provide the first revision. Compensation for that revision is included in the Memorandum of Agreement. Developer should not undertake further revisions and expect compensation therefore without the written approval of CGS. Revisions will be checked and approved by the CGS Director of Academic Programs, who may elect to use the Instructional Designer. Ownership of derivative works (revisions following the first revision) that are created by third parties will be owned exclusively by CGS and governed by University policy and any subsequent agreements that CGS may choose to enter with third parties.

IV. ROYALTIES AND COPYRIGHTS

A. Developer

1. Developer and the University of Pittsburgh shall jointly hold copyright in all materials developed hereunder. Copyright registration with the U.S. Copyright Office, if desired, is the responsibility of the Developer. If the Developer registers the work, a copy of the certificate of registration indicating the University's joint ownership shall be forwarded to the Office of General Counsel for filing.

2. The Developer retains the right to use the materials for instructional purposes in his/her own courses and at any other institution. In this case, a separate written agreement signed by the University of Pittsburgh must be obtained before the Developer may use materials at another institution. Developer may not assign the materials or course to another party without the prior written consent of the University.

3. The Developer is responsible for adhering to the guidelines and policies set forth by CGS/CGS Online regarding securing permissions for materials used in the online course.

B. College of General Studies/CGS Online

1. Except as stated in IV, A, above, and IV, C, below, the University of Pittsburgh retains the exclusive right to reproduce, sell, distribute, display, make derivative works of and use the instructional materials developed under the terms of this policy statement for instruction at the University of Pittsburgh.

2. CGS/CGS Online retains the right to revise the instructional materials, using a Developer of its choice, for use for instruction at the University of Pittsburgh.

3. All royalties on the sale of the materials by parties other than CGS/CGS Online will
be 50% to the Developer as outlined in University Policy 11-02-02 which can be found at http://www.bc.pitt.edu/policies/procedure/11/11-02-02.html.

C. Parties other than CGS/CGS Online

1. The reproduction and sale of instructional materials by parties other than CGS/CGS Online, for students other than the University of Pittsburgh students, may be performed at the discretion of the Developer with the prior written consent of the University of Pittsburgh.

2. Should the Developer enter into a contract with a party other than CGS/CGS Online to publish these instructional materials, that party should be fully informed of this policy statement and any existing agreement.

V. POLICY ON AFFIRMATIVE ACTION

The University of Pittsburgh, as an educational institution and as an employer, values equality of opportunity, human dignity, and racial/ethnic and cultural diversity. Accordingly, the University prohibits and will not engage in discrimination or harassment on the basis of race, color, religion, national origin, ancestry, sex, age, marital status, familial status, sexual orientation, disability, or status as a disabled veteran or a veteran of the Vietnam era. Further, the University will continue to take affirmative steps to support and advance these values consistent with the University's mission. This policy applies to admissions, employment, and access to and treatment in University programs and activities. This is a commitment made by the University and is in accordance with federal, state, and/or local laws and regulations.

I have read the foregoing terms and conditions and intend and agree to be legally bound thereby.

________________________________________________________________________

Developer

Date
SECTION 2: CGS ONLINE COURSE DEVELOPMENT TIMELINE AND STEPS/DELIVERABLES

Section 2 provides information related to the CGS online course development timeline and the steps and deliverables of the development process. Included in this section are also the CGS course review forms used by CGS Academic Affairs and the teaching and learning consultant from the University Center for Teaching and Learning in the evaluation and approval process of online courses as well as our rubric of criteria and quality standards for online courses. Please refer to these key resources as you work on the concept and development of your course.

Level of Development Prior to the Start of the Course

In keeping with the goal of offering high-quality online courses that are consistent with the quality of the course offerings through the University of Pittsburgh in other formats, it is critical that specific course materials be fully developed and available for students at the time they are required. Normally the entire course should be developed one month prior to its offering. In particular, the department chair and/or dean may require that the course be fully developed prior to its first offering. Only in exceptional cases should a course be approved to be offered if it is not fully developed prior to its first meeting.

Course Development Timeline, Deliverable, and Due Dates

Developing and teaching an online course in either the web or hybrid format requires a significant time commitment on the part of faculty members. Many research studies report that effort required to develop and teach online courses is equivalent to developing and teaching the same course in a face-to-face modality.

The CGS online course development process is estimated to take a minimum of one full term, starting with a written proposal and signed authorization forms. The Course Development Timeline below provides a basic overview of the stages of development and the length for each development stage. CGS Standard Calendar have also been listed for further reference. Deadlines for the project milestones will differ depending on the term in which you plan to first offer the course and progress to date and are, therefore, determined in consultation with the CGS Director of Academic Programs.

Types of Deliverables

- Course syllabus:
  - should include course purpose and educational outcomes, textbook(s), class requirements, assignments, grade distribution, courses policies, and calendar.
- Course blueprint template:
  - Overall framework for content delivery & basic components of course units.

CGS Online Course Development Rubric

I. Course Overview and Introduction

**Review Standard I.1**

**Navigational instructions make the organization of the course easy to understand**

Instructions provide a general course overview, guide the new student to explore the course website, and indicate what to do first. Instructors may choose to incorporate some of this information in the course syllabus. If so, students should be directed to this item at the beginning of the course. Other ways to make course navigation easy to follow might be the use of a course tour, clear statements for getting started, a “Start here” tab, or an assignment to encourage course explanation.

**Review Standard I.2**

**A statement that introduces the student to the course and structure of learning**

The learning process is structured to include the schedule, communication modes, types of activities, and assessment. These are often found in the course syllabus and should include the course schedule, course sequencing, the variety of activities, calendar of assignments and due dates, preferred mode for communication, and testing and submitting assignments procedures. For a detailed outline, see “CGS Syllabus Checklist” (Appendix).

**Review Standard I.3**

**Netiquette expectations with regard to discussion, email, and chat room communications are clearly stated**

Expectations for student conduct in the online environment must be outlined clearly. Some items to include:

- Rules of conduct for participating in discussion boards or chat rooms
- Rules of conduct for email exchange
- “Speaking style” requirements – no net acronyms
- Defined spelling and grammar expectations

**Review Standard I.4**

**The introduction of the faculty is appropriate**

The initial introduction creates a sense of connection between the instructor and the students. It should present the instructor as professionals as well as approachable, and include more than basic essentials, such as information about your teaching philosophy, past experience with teaching online, hobbies, and a photograph.

**Review Standard I.5**

**Students are required to introduce themselves to the class**

The student introduction helps create a supportive learning environment and a sense of community. Students are asked to introduce themselves and given guidance on where and how they should do so. Instructors might ask students to answer specific questions (such as why they are taking the course, what they expect to learn, etc.) or may choose to let the students decide. Instructors may provide an example of an introduction and/or start the process by introducing themselves.

**Review Standard I.6**

**Clearly stated technology requirements, minimum student skills, and any prerequisite knowledge in the discipline**

Sufficient technology and Internet access is required for online courses. You may want to consider listing hardware requirements (microphone, speakers, or headset); operating system
and software requirements (Windows 7 or newer, Microsoft Office 2013, Chrome, Internet Explorer, virus protection or familiarity with firewall, pop-up blocker, or anti-spam software, etc), as well as any other information that is pertinent to your course.

## II. Learning Objectives

<table>
<thead>
<tr>
<th>Review Standard II.1</th>
<th>Measurable learning objectives ensure instructions precisely describe what students are to gain from instructions, and then guide instructors to accurately assess student accomplishment. All objectives describe student performance in specific, observable terms.</th>
</tr>
</thead>
</table>
| **The learning objectives of the course describe outcomes that are measurable** | Examples of measurable objectives:  
- Select appropriate tax strategies for different financial and personal situations  
- Develop a comprehensive, individualized wellness action program focused on the sedentary lifestyle |
| Review Standard II.2 | Examine the learning objectives (course and unit level) as a whole for all three types of skills. Every single objective may not contain all three components. Content mastery should be appropriate for the type and level of the course. |
| **The learning objectives address content mastery, critical thinking skills, and core learning skills** | Critical thinking skills may include the ability to:  
- Distinguish between fact and opinion  
- Distinguish between primary and the secondary sources  
- Identify bias and stereotypes  
- Evaluate information sources for point of view, accuracy, usefulness, etc.  
- Recognize deceptive arguments |
| Core learning skills may include: |  
- Written and oral communication skills  
- Manipulation/organization of information in various ways or using different tools  
- Understanding what one knows and how one knows it, and also does not know and what one needs to find out |
| Review Standard II.3 | The learning objectives are clearly stated and understandable to the student |
| **The learning objectives are clearly stated and understandable to the student** | Students can easily grasp the meaning of learning objectives. Use of jargon, confusing terms, unnecessarily complex language, and puzzling syntax are avoided. |
| Review Standard II.4 | Instructions to students on how to meet the learning objectives are adequate and easy to understand. |
| **Instructions to students on how to meet the learning objectives are adequate and easy to understand.** | Clear and complete instructions may take various forms (i.e. narratives, bulleted lists, charts) and may appear at different levels within the course (e.g., under weekly modules). |
| Review Standard II.5 | The learning objectives of the course are articulated and specified on the module/unit level. |
| **The learning objectives of the course are articulated and specified on the module/unit level.** | Module of unit level objectives may be written by the instructor or come from the textbook. If no such objectives are found, the instructor must gather more information. |
**Review Standard III.1**

**The assessments measure learning objectives and are consistent with course activities and resources.**

Assessments, learning objectives, and learning activities align in a clear and direct way. The assessment formats must provide a reasonable way to measure the stated learning objectives. Make sure to include all the objectives appropriate to the course.

Examples of inconsistency:
- The objective is to be able to “write a persuasive essay” but the assessment is a multiple choice test.
- The objective is to “demonstrate discipline-specific information literacy” and the assessment is a rubric-scored term paper, but students are not given any practice with information literacy skills on smaller assignments.

Examples of objective alignment:
- A problem analysis evaluates critical thinking skills.
- Multiple choice quiz tests vocabulary knowledge.
- A composition assesses writing skills.

**Review Standard III.2**

**The grading policy is transparent and easy to understand**

Review the clarity of presentation to the student, not the simplicity or complexity of a given reading itself. A relatively complex grading system can still be unambiguous and easy to understand. For example, a list of activities, tests, etc. that will affect the students’ grade is included at the beginning of the course. You should include your policy on late submissions as well as your grading scale.

**Review Standard III.3**

**Assessment and measurement strategies provide feedback to the student**

Students learn more effectively if they receive frequent, meaningful, and rapid feedback. This feedback may come from the instructor directly, from assignments and assessments that have feedback built into them, or from other students.

Examples:
- Instructor participation in a discussion assignment.
- Writing assignments that require submission of a draft for instructor comment and suggestion for improvement.
- Self-mastery tests and quizzes that include informative feedback with every answer choice.
- Interactive games and group work that have feedback built in.

**Review Standard III.4**

**The types of assessments selected and the methods used for submitting assessments are appropriate for the online learning environment**

Assessments make use of the technologies and security found in an online classroom.

Examples that meet the standards:
- Submission of text or media files via Turnitin or Safe Assign.
- Exams given in a proctored testing center.
- Quizzes with time limitations and other security measures.
• Multiple and authentic assignments which enable instructors to familiarize themselves with each student’s work and give a true indication of the learning objectives being met.

Examples that do not meet the standards:
• Required assessment that cannot be submitted online, such as a lab practicum in a science course.
• A course in which the entire set of assessments consists of 5 multiple choice tests taken online, with no enforcement time limit, the print function enabled, and minimum security features in place.

Review Standard III.5

’Self-check’ or practice assignments are provided for quick student feedback

Students have opportunities to measure their own learning progress. Use “self-check” quizzes and activities, as well as other types of practice opportunities that provide rapid feedback. Such assignments should be voluntary or allow for multiple attempts, for example practice quizzes, games, practice written assignments, and peer reviews.

IV. Resources and Materials

Review Standard IV.1

The instructional materials support the stated learning objectives and have sufficient breadth and depth for subject learning

Instructions should provide meaningful content in a variety of ways, including the textbook, PowerPoint presentations, websites, lecture notes, outlines, and multimedia.

Review Standard IV.2

Instructional materials represented in a format appropriate to the online environment. These materials are accessible and usable for students

Students with required technical equipment and software can view the materials online. If some of the course resources, including textbooks, videos, etc., are unavailable within the course website, determine how students would access and easily use them.

Examples:
• Textbooks and/or CDs, if used, include titles, authors, publishers, ISBN numbers, copyright dates, and information as to where copies can be obtained.
• A navigation button is devoted to “Resources” and appropriately tied in with the overall course design.
• Required software plug-ins are listed, along with instructions for obtaining and installing these plug-ins.

Some visual format problems could include:
• Text size might be too inconsistent for typical View/Test size setting.
• Large text files are presented without table of contents or unit numbering.
• Multimedia files require plug-ins students do not have.
• Science lab courses may include learning activities that are not easy to format for online reading.

Review Standard IV.3

The purpose of the course elements is evident (content, instructional methods, technologies,
and course materials).

Students can easily determine the purpose of all materials, technologies, and methods used in the course and whether materials are required or recommended. For example, a course may be full of external links to Internet resources, but it is unclear if they are for background information, personal enrichment, or required for an assignment.

Examples of good course elements:

- Links to external websites indicate the purpose of the links or are self-evident.
- The functions of exercises are clearly explained or are completely self-evident.

**Review Standard IV.4**

The instructional materials, including supporting materials, are consistent in organization

Online courses should use multiple types of instructional materials appropriate for the level of the course and students must easily understand how they relate to each other. For example, a course requires students to use: a textbook divided into chapters, video segments ordered by topics, a website organized around specific skills, and a tutorial CD-ROM/website with an opening menu of “practice quizzes,” “images,” and “audio examples.” Such diversely formatted materials must be integrated well enough to be useful to the uninitiated student.

**Review Standard IV.5**

All sources and materials used are appropriately cited

Resources created by the instructor and those borrowed from other sources should be distinctly identified. Text, images, graphic materials, tables, videos, audios, websites, and other forms of multimedia are appropriately referenced according to the University of Pittsburgh’s copyright and intellectual property policy.

V. Learner Interaction

**Review Standard V.1**

The learning activities promote the achievement of stated objectives and learning outcomes

Learning activities are various and include class discussions, case studies, practice quizzes, tests, group work, etc. and align with and support the learning objectives. Most of the objectives can be reasonably achieved by students completing the learning activities.

Examples of mismatches between activities and objectives:

- The objective requires students to be able to deliver a persuasive speech, but the activities in the course do not include practice of that skill.
- The objective is “Prepare each budget within a master budget and explain the importance in the overall budgeting process.” Students review information about this in texts, observe budgets by the instructor, and produce only one budget.

**Review Standard V.2**

Learning activities foster instructor-student, content-student, and student-student interaction

All online courses should include interaction between the instructor and the students and between the students and the content. The degree and type of student-to-student interaction may vary with discipline and the level of the course.

Examples of learning activities (blogs, wikis, discussion boards, etc.) that foster the following types of interaction:

- **Instructor-student**: Self-introduction; discussion postings and responses; feedback on project assignments; evidence of one-to-one e-mail communication, chat, virtual classroom, etc.
- **Student-content**: Essays, terms papers, presentations, group projects, etc. based on readings, videos, and other content; self-assessment exercises; group work products, etc.
- **Student-student**: Self-introduction exercise; group discussion postings; collaborative group projects; peer critiques, blogs, wikis, student home page etc.

**Review Standard V.3**

**Clear standards are set for instructor response and availability**

Information clearly indicates instructor response time for key events and interactions, including e-mail response time, when feedback will be provided, time required for grade postings, discussion postings, etc. Standards also include instructor availability (office hours) via other media (phone, in person, Skype), as determined by the faculty.

**Review Standard V.4**

**The requirements for course interaction are clearly articulated**

A clear statement of requirements should indicate the criteria for interaction. For example, students required to participate in discussions are told how many times each week they must post original comments, responses to other’s comments, what the quality of the comments must be. How comments will be evaluated, what grade credit they can expect for levels of performance, and whether the interaction is required or optional.

**Review Standard V.5**

**The course design prompts the instructor to be present, active, and engaged**

Students know that the instructor is approachable and will regularly interact with them. Opportunities for interaction will vary with the discipline of the course.

Examples:
- An actively used and well organized instructor-facilitated discussion board.
- Optional “electronic office hours” provided in the chat room or chat sessions on selected topics, archived/edited and posted as an FAQ for other students.
- An invitation for the class to email the instructor with individual concerns.
- Current announcements, either in the online classroom or via email.

## VI. Course Technology

**Review Standard VI.1**

**The tools and media support the course learning objectives and are integrated with texts and lesson assignments**

Tools and media used in the course support related learning objectives, and are integrated with texts and lesson assignments. Students know how the tools and media support the assignments and learning objectives.

**Review Standard VI.2**

**The tools and media enhance student interactivity and guide the student to become a more active learner**

Tools and media used in the course help students actively engage in the learning process, rather than passively “absorbing” information.

Examples:
- Automated “self-check” exercises requiring student response.
- Animations, videos, and games that require student input.
- Software that tracks student interaction and progress.
- Use of discussion tools with automated notification or ‘read/unread’ tracking.
### Review Standard VI.3

**Technologies for this course are either provided or easily downloadable**

The term “technologies” may cover a range of plug-ins, such as Acrobat Reader, media players, etc. and courses may require special software packages for math calculators, spreadsheets, etc. Clear instructions tell students how to obtain needed packages.

### Review Standard VI.4

**Tools and media are compatible with standards of delivery modes**

Course tools, media, and delivery modes meet current standards for widespread accessibility. For example, if most students use streaming media, such a mode is acceptable. If students do not have access to this technology, it should not be used.

### Review Standard VI.5

**Clearly stated instructions on how to access resources at a distance are sufficient and easy to understand**

Students are aware and able to obtain remote access to learning resources; information on these resources must be visible with clear instructions for accessing them.

Example:
- The instructor mails to students a custom CD they have prepared for the course.
- An explanation of how to obtain full text journal is provided in the assignment that requires their use.

### Review Standard VI.6

**Technologies take advantage of existing economies and efficiencies of delivery**

New innovative technologies appear all the time and online course technology should be current. Courses not recently developed may need to be updated. For example, using compressed files to reduce file downloading time or delivering audio files in a common file type, such as Windows Media or RealPlayer.

### VII. Learner Support

**Review Standard VII.1**

**Course instructions link to a clear description of the technical support offered**

Students should have access to technical support including information about how long to log in, use the software, upload files, etc. and does not include help with course content, assignments, or support services. For example, provide a clear description of the services, including a link to a technical support website email and a phone number for a helpdesk.

**Review Standard VII.2**

**Course instructions link to an explanation of Pitt’s academic and student support system and assist the student in effectively using the resources**

**Review Standard VII.3**

**Course instructions link to tutorials and resources that answer questions related to research, writing, technology, etc.**

Student access to tutorials and help files related to writing, technology, research, etc. does not include help from another person, tutorials and resources specifically related to course content. Students should have access to such support services from within the course with a clear description of the tutorials available and how to get them.
### VIII. Accessibility

**Review Standard VIII.1**

**The course acknowledges the importance of ADA requirements**

All online courses should direct students about how to access Pitt’s Americans with Disabilities Act (ADA) services on campus. The course must have both a statement that tells students how to access these services and be on approved Course management System (Blackboard). Consult with the University Center for Teaching and Learning (UCTL) about providing an appropriate ADA statement.

**Review Standard VIII.2**

**Web pages provide equivalent alternatives to auditory/visual content**

Alternative means of access to course information are provided for the vision or hearing impaired student, such as equivalent textual representations of images, audio, animations, and video in the course website. Presenting information in text format is generally acceptable with screen reader software to read text.

**Review Standard VIII.3**

**Web pages have links that are self-describing and meaningful**

Instructors provide links to Internet content with useful descriptions of what students will find at those sites, enabling the student to use screen reader software to understand links.

Examples:

- All file names and web hyperlinks have meaningful names. For instance, the link to take a quiz should say “Take Quiz 1” not “Click Here.”
- Icons used as links should also have HTML tags or an accompanying text link.

**Review Standard VIII.4**

**The course demonstrates sensitivity to readability issues**

The course uses font, color, and spacing to aid readability and minimize distractions.

Examples:

- Formatting such as bold or italics in addition to color coding text.
- Web page provided in an alternate, non-color-coded format.
- Formatting and color coding are used to communicate key points, group terms, show relevant relationships, etc.
SECTION 3: EXPECTATIONS FOR CGS ONLINE INSTRUCTORS

BEST PRACTICES in ONLINE TEACHING

Prior to the first day:

Class Preparation

Prepare/update the Blackboard course shell for each course taught and make sure it is available to students on the first day of term.

Note to instructors taking over an existing course:

• Several months prior to the term in which you will be teaching your newly assigned CGS section, you will be automatically assigned a new course shell via PeopleSoft when the University Center for Teaching and Learning creates the shells. We recommend you subscribe to their newsletter where they announce course shell availability (http://www.teaching.pitt.edu). If you need assistance populating the course shell, please contact our Program Assistant, Leslie Hilliard at hilliard@pitt.edu.

• CGS Academic Affairs staff and a teaching and learning consultant will be in the course as TAs so we may assist you and students and to make sure that the course has been made available to students on the first day of the term as required.

• Our expectation is that you prepare the shell for the new term according to the expectations outlined in this document.

Syllabus

The syllabus should be as complete and up to date as possible and include all criteria listed in the “CGS Syllabus Checklist” (Appendix in this guide).

• Update deadlines so they are appropriate for the term in question.

• Update faculty information so it describes you, your contact information, and office hours.

• It is important in a web-based course to include even more detail in the syllabus than you would provide for a face-to-face course, as well as an explanation of your Blackboard site, how students should get started, the process for submitting assignments, and other items that need to be detailed for students operating in such an environment.

• If your shell does not have a dedicated welcome page (in addition to the announcements page), and you would like to create one, please do! A dedicated welcome page can and should have something to spark interest: pictures, colored backgrounds, fonts, etc.

• All material and assignments for the first week should be posted by the first day of the term. A good practice is to have most of the course material posted by the beginning of the term and pick and choose what students will have access to at this point.
If this is an existing course, you may need to change any “timed announcements”: some announcements or modules may be set up to appear automatically at a certain date. You will need to update these settings.

Course Design and Activities

- All assignments and activities should begin with your learning objectives in mind, and provide multiple opportunities for practice to reach stated goals.
- Use a variety of learning approaches that facilitate student to student interaction and collaboration, such as discussion boards, chat sessions, and group work.
- Encourage students to move beyond required texts through use of internet and library resources, as well as expert knowledge.
- Carefully plan and monitor pace, sequence, and scope of all content and activities in the online classroom.
- Provide input about the appropriate use and purpose of all course content.
- Adult learning principles, active learning, and critical thinking should guide course design and activities.
- Provide places within the online environment for casual exchange, social discussion, and for students to direct questions. This will allow for student to student interaction and further discussion opportunities.

Note to instructors taking over an existing course:

- If you deem it necessary, you may add optional self-study tools, like no-credit quizzes, or optional/supplemental readings
- You would need to notify* the CGS Director of Academic Programs via email/in writing, if you decide to:
  - change required readings, module structure; format of instructor lectures, or notes; number of exams and other assessment activities;
  - eliminate discussion board assignments or replace them with journals, other types of instructor-to-student homework, or group assignments like blog or wiki;
  - eliminate face-to-face meetings or workshops
  - add face-to-face meetings or workshops.

NB: Your notification should include: 1) the reason for making the suggested change and 2) an explanation of how the suggested change enhances, complements, improves, and aligns with course content, objectives, goals, and student learning.
During the course:

- Make it clear to the students how to contact you best and when, either by e-mail or phone. As an example for students, you should respond to all inquiries within 48 hours.
- Facilitate discussions without dominating the thread and encourage interaction among your students.
- Provide regular feedback on each student’s progress in class; make use of the grade center.
- Set clear expectations for all assignments by giving useful and meaningful feedback on the first major assignment. Continue this practice for all assignments that follow.
- All feedback should provide opportunities for improvement and learning while also validating effort and understanding.
- Provide clear expectations for all grading and use multiple forms of assessment, rather than considering only a few graded assignments. A good practice is to use activities such as discussions or small group work to evaluate student learning.
- Remind and encourage your students to complete the OMET teaching survey when it becomes available on their CourseWeb page during the last two weeks of the semester.

It is important in a web-based course to:

- Regularly post announcements and course materials and send out e-mail reminders so that students may plan to complete all coursework.
- Use weekly discussion boards in your course to promote consistent and useful interaction between students.
- Establish a presence in the online classroom and create a shared classroom space by using the online environment as the starting point for all student activities, communications, and sources of information.
- Use the Blackboard grade book so students are aware of their progress in the course.
- In a web-based classroom, participation must be an important component of a student’s grade. Define and communicate for students a clear set of guidelines for participation in the online environment.

At the end of the course:

- Submit final grades according to the University schedule. This is an important step so that students may register for the next term and be eligible to receive financial aid.
- Re-evaluate your teaching practices and consider what could be improved.
- Consider ways to further develop your teaching practices and course materials.
- Write a brief Reflection Report to be submitted to the CGS Director of Academic Programs once the semester is officially over.
APPENDIX: ONLINE COURSE DEVELOPMENT
RESOURCES

I. Helpful Links and Information on the Web

Course Development

Detailed information on CGS policies, procedures, and expectations as well as a list of other available resources can be found on our website: http://www.cgs.pitt.edu/faculty-resources

Quality Matters and Online Learning Consortium

Pitt belongs here; QM has a lot of materials and ideas about standards for good online teaching
http://www.teaching.pitt.edu/membership-associations

Blackboard

PITT’s Computing Services and Systems Development (CSSD) has tip sheets on how to use various blackboard tools
http://technology.pitt.edu/services/courseweb-blackboard

The main CSSD Help Desk (http://technology.pitt.edu/help-desk) can help you learn your way around Blackboard if you go in with questions. You can get Blackboard help by calling 412-624-HELP (Pitt tech help); they will forward the call for you.

II. Resources Included in This Guide

• CGS Syllabus Checklist for Online Courses and Samples
• Developing Modules
• Developing and Teaching Your Online Course
• Blackboard: Blogs-Wikis-Journals
• Online Discussion: Strategies and Considerations
CGS SYLLABUS CHECKLIST FOR ONLINE COURSES

A syllabus is a contract between the instructor and the students that makes clear the expectations and requirements each party is supposed to fulfill.

Basic Course Information (Heading)
- Institution
- Department/school offering the course
- Course subject, number, and title
- Term and year offered
- Delivery method (self-paced, hybrid, web)
- Location and time for workshop meetings (self-paced and hybrid)

Faculty Contact Information
- Name
- Office location (if any)
- Phone number(s) (may include departmental telephone number)
- Email address(es)
- Office hours

Course Details
- Course description (should include a broad overview of course topic, learning outcomes, and academic requirements fulfilled, and/or prerequisites)
- Course materials (textbooks, videos, course reserves etc. and information on what is required and how to obtain/access the materials)
- Additional course materials/software/hardware and brief explanation how they will be used

Course Structure
- Statement for using Blackboard as the Learning Management System (LMS) for the course
- Description of your Blackboard course organization (modules, weeks, or topics)*
- Methods of course delivery (e.g. PowerPoint lectures, instructional videos, online discussion, etc.)
- Course calendar and schedule (due dates for topics, readings, assignments, exams, or special activities)

Course Requirements and Grading
- Course requirements and their percentage value*
- Grade scale and standards (incl. Information on extra credit)*
- Abbreviated description of the content and format of each requirement. Detailed information should be provided in a separate document and accessible in Blackboard.
- Any additional information unique to your course (e.g., your role in online discussions; amount of time students will need to prepare for each assignment; for hybrid courses, the connections between online and in-person meetings, etc.)

Policies and Expectations
- Late submission and missed assignments
- Class participation (for online courses: Blackboard presence and netiquette)
- Student to instructor communication expectations
- Email Communication Statement*
- Class/workshop cancellations
- Your use of the Grade Center and a timeframe for providing students with feedback on each assignment
- Nonstandard grades (G grades etc.)
- Academic integrity
- Disability Services
- Classroom Recording
- Accessibility
- Copyright Notice
- Religious Observances
- Examination policy
- Turnitin/SafeAssign Statement

Sample: Requirements, Assignments, Percentages

Your Course Grade will be calculated as follows:

- Class Attendance and Participation: 10%
- Online Discussion Board (5 forum contributions, 5% each): 25%
- Group Assignment: 15%
- Tests (2 closed book online examinations 10% each): 20%
- Final Project: Research Paper: 30%

Total: 100%

Sample Grade Scale

Note: may vary per school, department, or instructor

Course Policies and Expectations

Late Submission and Missed Assignments

All exams and assignment due dates are given on the course schedule. Please mark your calendar accordingly.

Make-up exams will be given on a case-by-case basis only in the most severe, exceptional cases and at the instructor’s discretion. Please be aware that proper documentation must be provided in these instances. Please be aware that make-up exams may differ in both content and format.

Class Participation

Class participation is an important component of this course and is measured via the Discussion Board. Discussion Board is, therefore, a major component of our on-line course and is considered a substitute for in-class participation. Students are expected to offer comments, questions, and replies to the discussion question(s) that have been posed on the Discussion Board for each module as well as to classmate postings. Students are expected to actively participate in EACH module's discussion EACH week throughout the semester.
Note on Discussion Board Etiquette: Please show respect for your fellow students in all course communications. Offensive or disrespectful comments will be removed from Discussion Board and earn you no credit.

Communications Policy
Any course announcements will be sent to you via CourseWeb, so it is important that you regularly check CourseWeb and your Pitt email account. Students may have their email forwarded to another email account if they wish, however the establishment of such is solely the responsibility of the student.

I encourage students to contact me with any questions/concerns/issues/comments. The easiest way to get in touch with me is via email. I generally will respond within 48 hours during normal business hours (9-5PM M-F) if you do not receive an email response from me within 48 hours it means that I never received your email or I responded and, for some reason, you never received the response - please resend your email. If you are emailing me because you are having trouble with an assignment, please do not wait until the last minute to ask for help.

Email Communication Statement
Each student is issued a University e-mail address (username@pitt.edu) upon admittance. This e-mail address may be used by the University for official communication with students. Students are expected to read e-mail sent to this account on a regular basis. Failure to read and react to University communications in a timely manner does not absolve the student from knowing and complying with the content of the communications. The University provides an e-mail forwarding service that allows students to read their e-mail via other service providers (e.g., Hotmail, AOL, Yahoo). Students that choose to forward their e-mail from their pitt.edu address to another address do so at their own risk. If e-mail is lost as a result of forwarding, it does not absolve the student from responding to official communications sent to their University e-mail address. To forward e-mail sent to your University account, go to http://accounts.pitt.edu, log into your account, click on Edit Forwarding Addresses, and follow the instructions on the page. Be sure to log out of your account when you have finished. (For the full E-mail Communication Policy, go to www.bc.pitt.edu/policies/policy/09/09-10-01.html)

Nonstandard Grades
Incomplete (I) grades will only be awarded only to students who have been doing the regular work of the course but who need more time than the term allows due to the nature of their research. The “G” grade is applied only when students who have been attending a course and making regular progress are prevented from completing the course by circumstances beyond their control, such as a major medical emergency. These grades will only be given in very rare documented circumstances governed by the current CGS student handbook.

The next three statements are required by the University for all syllabi.

Academic Integrity
Students are required to comply with the University of Pittsburgh’s Policy on Academic Integrity, http://www.as.pitt.edu/faculty/policy/integrity.html, found at this link. Any student violating this obligation for any reason during the semester must participate in procedural process, initiated at the instructor level, as outlined in the University Guidelines on Academic Integrity.

Disability Services
If you have a disability, contact both your instructor and the Office of Disability Resources and Services (DRS), 216 William Pitt Union, 412-648-7890/412-383-7355 (TTY) as early as possible in the term. DRS will verify your disability and determine reasonable accommodations for this course.
Statement on Classroom Recording
To ensure the free and open discussion of ideas, students may not record classroom lectures, discussion and/or activities without the advance written permission of the instructor, and any such recording properly approved in advance can be used solely for the student’s own private use.

Accessibility
Blackboard is ADA Compliant and has fully implemented the final accessibility standards for electronic and information technology covered by Section 508 of the Rehabilitation Act Amendments of 1998. Please note that, due to the flexibility provided in this product, it is possible for some material to inadvertently fall outside of these guidelines.

Copyright Notice
These materials may be protected by copyright. United States copyright law, 17 USC section 101, et seq., in addition to University policy and procedures, prohibit unauthorized duplication or retransmission of course materials. See Library of Congress Copyright Office and the University Copyright Policy.

Religious Observances
In order to accommodate the observance of religious holidays, students should inform the instructor (by email, within the first two weeks of the term) of any such days which conflict with scheduled examinations or assignment due dates. The instructor will contact the student to confirm alternative arrangements.

Turnitin/SafeAssign Statement
Faculty who plan to use the Turnitin or SafeAssign service to evaluate student papers for potential plagiarism must include the following statement in the course syllabus. Faculty using this service are encouraged to accommodate students who wish to use pseudonyms to protect their privacy.

Students agree that by taking this course all required papers may be subject to submission for textual similarity review to Turnitin.com or Blackboard’s SafeAssign internal search service for the detection of plagiarism. All submitted papers will be included as source documents in the respective reference database solely for the purpose of detecting plagiarism of such papers. Use of Turnitin.com page service or Blackboard’s SafeAssign tool is subject to the Usage Policy and Privacy Pledge posted on the Turnitin.com site or Blackboard’s SafeAssign page.

DEVELOPING MODULES

Development of an online course involves creating modules. Whatever you are teaching, you must divide the contents of your course into digestible pieces, called **modules**. This gives your course contents structure, consistency, and form for online presentation and delivery to your students.

**Creating the modules involves the following steps:**

1. **Step 1:** Identify and make a list your course modules. This can be done in several ways:
   - by content-specific topics
   - by chapters of a textbook you are using
   - by date or time frame
   - by a metaphor
   - by steps in a process
2. **Step 2:** Sequence your modules
3. **Step 3:** Name your modules

**Tips:** (from Sloan-C)
- The number of modules in your course should not exceed the number of weeks in the semester.
- Start your course with an ice breaker activity.
- End your course with a closing activity. (That activity can help you get feedback from students, which may be useful as you review and revise your course.)
- Consider areas of your course for class community type of activities. e.g., where students can meet each other and talk about non-course related activities.
- Consider private communication with students.
- Consider how and where and when you will make and archive class/course announcements.
- Adopt a clear, logically-organized, and consistent module structure, including well-named documents that indicate the type of activity, due date, or time frame.

**What to include in modules?**

**Introduction/Overview**

This section serves as an introduction to the module students are beginning. This is a chance for faculty to explain the focus of the course for that particular time period. It is important to be brief, but clear about what material and information will be covered, establish the time period (one week, two weeks, etc.), and possibly a brief description of the type of activities students should be prepared to complete.

**Learning Goals & Objectives**

Unlike in the syllabus where the overall goals and objectives for the course were set down, these learning goals and objectives are specific for the module. These include what the students should expect to get out of a particular module.

**Expectations**

It is recommended that you also give clear and explicit details of your expectations from students for each module.
Lecture Notes
This is can be an outline of notes or the actual set of notes that students will need to follow along with the activities, presentations, and discussions associated with this time period of the course.

Focus Questions
This section poses questions related to materials and concepts that are important for the module’s topics of discussion. These questions will help organize and focus your readings and participation in interactive activities, such discussion boards or chat rooms.

Handouts
This is a place to offer links to documents related to the module. These can be required items or handouts meant to supplement the module content and activities. It is advised that these be links so that students can print them or save them to their computer.

Exercises and Other Learning Activities
This section should include a thorough description of the learning activities—what the student will be doing as he/she works through this module. It may include presentations of media for the purpose of explaining, discussing, or elaborating on concepts from the module. This would also be the place to link discussion boards, audio files, video conferencing, and chat room discussions that serve as the means of interaction between students and faculty for this module period and help students meet the objectives associated with this period of time in the course. You may also consider offering quizzes that give opportunities for immediate feedback to the students as far as how much of the material they are understanding and retaining. Do not forget to give comprehensive instructions on how to create, participate, submit, or accomplish every learning activity in a module.

Assignments
This is where faculty would list assignments related to this specific course module. This is a good place to use the assignment function which allows faculty to upload all student assignment turned in at one time rather than track individual files.

Assessments/Evaluations
You should also provide clear and explicit details on how you will evaluate/assess student work and participation through each module.

Related Readings
This section lists the readings students should complete by the end of the module. These may be set up with due dates throughout the time period of the module or they can all be due by the end of the module.
DEVELOPING AND TEACHING YOUR ONLINE COURSE

An online course is NOT simply a traditional face-to-face course replicated on a computer screen.

An online course is still based on course goals and learning outcomes. However, a key difference is that students do not need to rely on face-to-face interaction to learn content. This also means the computer communication and feedback are highly important and should be structured accordingly. Long lectures are not effective for online course presentation. A successful online course will reflect the communicative nature of the online environment and incorporate resources from the outside world.

Although studies have shown that the medium of online instruction has not significantly altered learning, the design of the materials on the online medium has great influence. The basic instructional design steps are:

- analysis
- design
- development
- implementation
- evaluation

Your instructional designer can help you through all of these steps.

Educators must first design their curriculum, goals and objectives and then consider how the online environment can best serve the instructional objectives and activities of that curriculum.

This requires changes in pedagogy, with instructors taking the role of facilitators of information while guiding students toward solutions. In order for online learning to be successful, teachers as well as learners must take on new roles in the teaching-learning relationship, and faculty must be willing to release control of learning to the students.

Online learning environments allow various interactive methodologies. By adapting these methodologies to their courses, instructors can pay more attention to the instructional design of their courses. As a result, the quality, quantity, and patterns of communication students practice during learning are improved.

Many instructional strategies used in traditional classrooms can be successfully adapted for facilitating online learning. Instructors should choose strategies that are most effective for accomplishing their educational objective. From this perspective, instructional strategies are tools available to instructors for designing and facilitating learning.

Learning Activities

Online courses require different kinds of learning activities. Below are examples of typical learning activities that can be used in the online learning environment:

- Discussion
- Chat
- Pop-quiz or self-test
- Small group work
Here are some specific **activities to enhance student learning** (addressing multiple learning styles):

- Video clips of interviews, movements
- Historical audio clips of famous speeches
- Screen animations (“viewlets”) for instructional exercises illustrating software use
- Online journals or personal interview reports
- Students report back with reviews of Web-based resources
- Crossword or word search puzzles
- Matching and game-show-style trivia games
- Online scavenger hunt / WebQuest
- Annotated bibliography
- Guest speakers facilitate student discussions
- Flash simulations

Here are some **activities to develop critical thinking and problem-solving skills**:

- Discussions center on questions without a single correct answer
- Compare and contrast exercises
- Case studies or “real world” scenarios requiring Web-based research
- Role playing
- Critique classmates’ assignments
- Collaborative exercises
- Portfolios (building one activity upon another) to share/peer review
- Agree to disagree to promote higher thinking
- Online presentations (e.g., informational web pages, Web-based student-generated quizzes)

**Tips for Instructors:**

Simply publishing a Web page with links to other pages or other digital resources does not constitute online instruction. Materials developed for Web-based instruction must follow
established instructional design principles in order to be effective and viable means of education.

Some basic principles of instruction are same for both face-to-face and online courses. Therefore, Robert Gagné’s *Nine Universal Steps of Instruction* can be helpful in design of learning materials:

- Motivate the learner
- Explain what is to be learned
- Recall previous knowledge
- Present the material to be learned
- Provide guidance for learning
- Active involvement
- Provide feedback
- Test comprehension
- Provide enrichment or remediation

*Source:* [http://www.ion.uillinois.edu](http://www.ion.uillinois.edu)

The most common suggestions for online teaching comes from Chickering, A. W., and A. F. Gamson’s *Seven Principles of Good Practice in Online Teaching and Learning*:

- The developer/instructor encourages student-faculty contact and interaction.
- The developer/instructor encourages student cooperation and reciprocity.
- The developer/instructor encourages active learning.
- The developer/instructor gives prompt feedback.
- The developer/instructor emphasizes time on task.
- The developer/instructor communicates high expectations.
- The developer/instructor respects diverse talents and ways of learning.

Accordingly, to achieve high levels of learning and student satisfaction, you will need to design an online course environment that is:

- learner/learning-centered
- knowledge-centered
- assessment-centered
- community-centered

There are also some practical tips developed particularly for online courses:

- Adopt a learner-centered teaching philosophy for online courses. The online learning environment provides more opportunities for learner-control and learner-centered activities.
- Design and utilize learning activities that engage students in active learning. Remember that active participation facilitates learning better than passive participation. Learning is a process of actively acquiring, processing information, and making sense of the information.
• Instructional materials that have been successful in the classroom may not be successful in an online format. Decide how these might be modified for online use.

• Content should be sequenced and structured in a manner that enables learners to achieve the stated goals.

• Information should be “chunked” or grouped to help students learn the content.

• Provide meaningful and authentic learning experiences that help learners apply course concepts and achieve course objectives.

• Use strategies that consider the different learning styles of students.

• Instructional and learning activities should encourage frequent and meaningful interactions among learners and between learners and instructors. Develop strategies and techniques for establishing and maintaining “learning communities.” This will help to overcome the isolation that students could experience when taking an online course.

• Provide detailed and clear instructions for course assignments and instructor notes.

• Provide ample opportunities for feedback and methods for assessment.

• Learn the technology yourself and know where to find support for both you and your students.

• While selecting appropriate instructional materials, be aware of the online instruction copyright issues and carefully observe all applicable laws.

**Source:** Florida Gulf Coast University, Online Design

In facilitating online courses, it is also suggested that you follow the below **Checklist for Action:**

• Do not lecture.
• Be clear about expectations of the participants.
• Be flexible and patient.
• Be responsive.
• Do not overload.
• Monitor and prompt for participation.
• For assignments, set up small groups and assign tasks to them.
• Be a process facilitator.
• Write weaving comments every week or two...
• Organize the interaction.
• Set rules and standards for good netiquette (network etiquette)...
• Establish clear norms for participation and procedures for grading...
• Assign individuals or small groups to play the role of teacher and of moderator for portions of the course.
• Close and purge moribund conferences in stages...
• Adopt a flexible approach toward curriculum integration on global networks.

**Source:** Chapter 6 of Teaching Online (Harasim et al., 1995)
BLACKBOARD BLOGS

Instructors can cultivate collaborative learning and interaction between students, between students and their instructor, and with the course content through the use of Blackboard’s blogs, wikis and journals tools.

Distinction between Blogs, Wikis and Journals

• **Blogs** (short for “web logs”) are a type of website that is maintained by a single author or group of contributors. A blog is a collection of entries (or “posts”) of commentary, news or descriptions of events, and may include text, links, photos or video. The entries are most commonly arranged in reverse-chronological order, with the most recent post appearing on top. On the Internet, blogs are generally public to the world, although they may also be geared to smaller, more defined groups. Readers are able to respond to posts by leaving comments. One example of a group blog is Crooked Timber ([http://www.crookedtimber.org](http://www.crookedtimber.org)), a political blog run by a group of academics from around the world. Good ideas for using blogs in teaching and learning include encouraging reactions to class readings, course content or current news events; or for following up on class discussions with relevant links or materials. NOTE: Blogs that are made ‘public’ in Blackboard are only available to the students registered in the course.

• **Wikis** are a series of linked Web pages collaboratively created by many authors. They are collections of information organized with one topic per page of the wiki, and are available to the world to read and often to write. One of the most well-known wikis on the Internet is Wikipedia ([http://wikipedia.org](http://wikipedia.org)). Wikis can be used in teaching and learning to build a glossary of terms, create a knowledge base, write a collaborative document, create a collection of clarifications or explanations, organize signups for class presentations, or show the steps for working out specific problems in a math or science course. They are extremely flexible.

• **Journals**, like diaries, are personal reflections. By default, journals in Blackboard are private between a student and instructor, but can be shared if the instructor wishes. Ideas for using journals for teaching and learning include student reflections on internships, service learning experiences, fieldwork, or specific course assignments. They can also be a great addition to students’ e-portfolios.

ONLINE DISCUSSION: STRATEGIES AND CONSIDERATIONS

The discussion method is the most popular teaching technique used in online courses.

Online discussion offers several advantages to face-to-face classroom interactions:

- Reserved or shy students may feel less vulnerable communicating their thoughts online than they would face-to-face in the classroom.
- All students have an equal opportunity to participate in the discussion.
- Students can explore a variety of perspectives shared online as they construct their own understanding of the material. If part of a message is missed or not understood, it can be revisited at any time.
- Responses tend to be more thoughtful and reflective than communications found in chats or even e-mail.
- Discussions can be archived and revisited, and printed at a later time.

However, if you want to initiate an online discussion, you have to think, plan, and carefully monitor it so that it becomes successful.

Characteristics of effective discussions:

- **Support course/assignment-learning objectives.** Keying topics to the readings, exercises and assignments for a particular week helps keep students focused on what is important and reinforces concepts that are being learned.
- **Generate interest.** Give students a reason to stay engaged by asking interesting and challenging questions.
- **Facilitate thought, not “just the facts.”** The construction of your questions requires a lot of forethought. Avoid broad topic threads (i.e., What do you think of the Spanish Civil War?) and factual questions for which there is only one answer. Include guided discussion questions, promote critical thinking through Socratic questioning, ask students to compare and contrast, connect to prior knowledge, etc.
- **Can be applied to everyday life or professional goals.** A good and preferred teaching strategy is providing opportunities for application of new information to students’ personal and professional lives. Discussion questions of this character can also allow everyone to demonstrate what he or she knows and let others learn from them.
- **Provide clear, explicit instructions.** Provide students with a list on the type of response, both initial postings and replies, you expect. Provide examples (exemplary responses). Take time to delineate each step of each individual discussion assignment.
- **Receive points and/or graded.** The most effective way to promote student participation is to make it required and graded.
- **Reflect a percentage of the course grade that is appropriate, feasible, and significant.** It is recommended that discussion is between 10 to 40 percent of total grade.
- **Provide a rubric or other evaluation tool that details the evaluation process.** When students know exactly how they will be evaluated they tend to live up to those expectations. Evaluation tools help foster effective discussion by decreasing student anxiety and defensiveness.
- **Require reply to other participants.** Encourage students to interact with each other, not just with you.
- **Include effective facilitation.** Think student-centered discussions! Do you want students to meet your expectations for online participation? They will follow your lead – involve yourself, participate. But don’t control the discussion; do not enter too quickly or too often into the discussions. Allow time for students to respond to each other, before commenting. Respond to questions directed to you personally. Redirect discussion only when information is incorrect, or is off-topic. Immediately stop inappropriate or hostile postings.

**Strategies for a successful online discussion:**

- **Communicate your expectations.** In your syllabus, clearly articulate your expectations and grading criteria for student participation including a required minimum number of weekly student contributions to the discussions. One of the most effective ways to promote student participation is to make it required and graded. Grade both for the quality of the postings as well as the quantity. To be an effective motivator, participation should constitute between 10-40 percent of the student’s overall grade.

- **Determine the goals and objectives** of the discussion before you initiate a forum and use them to help keep the discussion on track. If the purpose changes, make that clear to students.

- **Match the discussions to the course content.** Start discussion topics that will help students focus on the course material and share ideas as they process the assignments, readings, projects and exercises. The organization of discussion forums in your classroom should reflect the class structure and scheduled sequence of topics in the syllabus. For example, you might consider creating a discussion forum for each week of your course. This will help your students stay focused and on track.

- **Put the discussion questions and assignments together** in a way that will help students focus on the course material as they process the assignments and share ideas.

- **Require a hand-in assignment.** A requirement, such as a group project or individual paper, will ensure that students integrate, synthesize and apply the information that has been discussed in the discussion forum. It can also boost participation if the discussions are closely tied to the assignment.

- **Start the major topic threads yourself.** Often students need structure to get the discussions off to a good start. It’s a good idea for the instructor to start all major topic threads, so students will know where to post and feel comfortable jumping in to the discussion.

- **Formulate focused question(s) or problems** to begin threads. Seek postings that provide unique, rather than repetitive, responses.

- **Facilitate - don’t dominate.** It is crucial that you limit your participation to a level you can sustain and that your contributions complement and expand on ideas generated by the participants. Don’t try to respond to every posting in the classroom. Try to encourage your students to interact with each other, not only with you. You can do this by tying related messages in a thread together in one posting, and making comments that address several students. Also, you can ask follow up questions that stimulate further discussion and invite students to respond to their classmates’ ideas.

- **Limit the time for each discussion forum** you initiate. The period can always be extended if the discussion becomes particularly robust. Be sure participants are aware of the time limits.
• **Decide on a schedule for accessing** a discussion and notify your students of that schedule—e.g., discussion contributions should be in by each evening or by Friday of each week if you expect them to be read that day/week.

• **Establish and communicate general, clear criteria or guidelines** for your online discussion. For example, clearly state what kind of behaviors you want to avoid in the discussions (e.g., personal affronts, overly personal disclosures or prejudicial statements). Also, clearly communicate the writing styles and guidelines to be used in the discussions.

• **Be prepared to refocus a discussion** that drifts too far from the topic or from productive interchange. You may not be actively participating in the discussion, but you have to step in when a conversation moves too far off track. Carefully consider your wording when you redirect the discussion so as not to discourage contributions.

• **Clearly differentiate threads and responses** by using the subject line effectively. This will enable you and your students to easily locate specific information. If all the subject lines are the same, the forum quickly becomes confusing and overwhelming.

• **Facilitate student-led discussions.** Student-led discussions encourage active participation. Use student-led discussions to construct and confirm meaning through sustained discourse in a community of inquiry. Use icebreakers to introduce your students to the role of questions in thinking and learning and their role as discussion facilitators. Give detailed instructions on how to compose discussion questions. Also, consider having students take turns monitoring and guiding a discussion thread.

• **Make the activities interesting and relevant to your students’ needs.** Give students a reason to become actively involved in a discussion topic by appealing to their life experiences, interests and ambitions. They can use their chosen topics as examples in the class discussions, thus personalizing the course content to their needs or interests.

• **Make your teaching presence felt.** Suggestions for how to facilitate and direct discussions: identify areas of agreement/disagreement, seek to reach consensus/understanding, acknowledge student contributions, assess the efficacy of the process, present content and questions, focus the discussion, confirm understanding, diagnose misperceptions, summarize the discussion, respond to technical concerns, inject knowledge from diverse resources.

• **Give feedback.** Provide plenty of timely, constructive, and quality feedback, and where appropriate, add to a student’s answer engaging him/her in more dialogue. When the instructor participates in the discussion, providing critique, encouragement, and feedback, students cannot help but become more involved. For example, thank students publicly for comments contributed to the discussions that show particular insight or depth and encourage participants who have submitted shallow responses to consider a more in-depth contribution by asking for specific details pertaining to their posting, or for an example from their workplace.

• **Create a social atmosphere, which is friendly and enthusiastic.** Model the style and tone you want your students to use in their postings. Use discussion forums to promote collegiality, for introductions and interpersonal communication not related to the content of the course (*Bulletin Board, Gab-fest, Gripe-fest, The Suggestion Box, Antidepressants*—jokes). In addition to weekly forums for discussion on the course materials and topics, provide an initial forum (called the Water-cooler, lounge, pub, cafe, etc.) where students can introduce themselves to you and their classmates. By greeting all students individually in the first week of class in this forum, you can establish a supportive learning community where students feel they are part of a group. This same forum can be used later during the course for students to post messages of interest that may not be directly related to the weekly class discussions. Finally, it is also a good idea to provide a separate
forum for students to ask you and each other questions about the course, procedures, policies or other issues.

• **Teach discussion netiquette.** Publish a list of protocols or rules for your students to follow. This will help maintain order in the discussion and facilitate clear communication. Keep the atmosphere in your discussion forum respectful and supportive. Harsh words submitted to an online discussion forum will be more hurtful since they will remain there until they are removed. Show your students how you expect them to behave online by setting the tone in your communications with them in the discussion forum.

• **Be aware of different cultural patterns and communication styles.** Students from some cultures may not relate well to questions requiring volunteered responses. In this case, a question like, “Anyone care to comment on this?” might be changed to “Please post your response to the topic by Wednesday.” Humor is culturally specific and may not be perceived the same by everyone. Be aware that participants will have different learning styles. Some will learn more easily in groups, while others will excel when working independently. Provide a variety of activity-types allowing for differences in learning styles. Finally, some students may not feel comfortable sharing personal experiences while others find this process quite natural. You can respect these differences by offering options to your students in the way you frame your questions. For example, “Can you relate this to your own experience or one you have heard or read about?”

• Keep in mind that students do not have access to the visual, kinesthetic, and sound cues they are used in a conversation.

• If a student sends a question directly to you that could arouse the interest of other students, you may want to use it to begin a new forum (“Questions and Answers”) and share the question and your response with others in the class without revealing the student’s name. This might decrease the number of individual e-mails you receive on the same topic.
