

THE LONG AND WINDING ROAD: NONLINEAR PATHS TO THE HEALTH PROFESSIONS

Thursday, Nov. 4, 2021 | 12:00-1:30pm | Virtual

In the healthcare field, there are many roads that lead to a sense of professional accomplishment and satisfaction. How one gets to where they are going in the pursuit of their career and the time needed to get there will vary depending on personal and family circumstances. However, those vested in their education will arrive successfully.

Hear the stories of professional students in the School of Medicine and the School of Health and Rehabilitation Science who have taken a non-traditional path to achieving their educational goals. Best practices and informational resources will be provided to help transition the student from their pre-health track to a professional studies program.
